

3.0 GOALS AND OBJECTIVES

3.1 Project Mission

Use watershed planning as a tool to prevent further water resources degradation in order to maintain long-term quality within the Bonne Femme Watershed.

3.2 Bonne Femme Watershed Project Goals

- 1) Help Boone County, and the cities of Ashland and Columbia adopt procedures and policies that will help protect the streams in the watershed.
- 2) Developers and builders will be assisted in adopting best management practices (BMPs) that will help protect the streams' integrity within the watershed.
- 3) Provide cost-share assistance for land owners in the watershed to implement practices that will protect and restore the streams.

3.3 Goals of the Subwatershed Sensitivity Analysis

- 1) To collect and analyze scientific data in order to provide the Bonne Femme Watershed Project with an improved understanding of the relationship between development and the existing natural resources in the Bonne Femme Watershed.
- 2) Develop a GIS science driven land use “Decision Support” tool that will help steer and support land planning decisions.
